SUPERVISORY PATENT EXAMINER

The following is an examiner's statement of reasons for allowance:

The prior art such as Guerriero teaches that powder metallurgy methods of forming cast metal matrix composites containing varying amounts and filler materials are known. Guerriero also teaches that forming metal matrix composites containing two differently sized fillers, such as fillers having a high aspect ratio and fillers having a low aspect ratio will result in a composite that may exhibit many desirable properties. Guerriero further teaches that one of the many properties that may be enhanced by formation of a metal matrix composite as that disclosed is the property of thermal conductivity. However, Guerriero teaches that the method of forming such a metal matrix composite containing two differently sized fillers is by placing the fillers in a casting mold and subsequently infiltrating the mold with molten metal as opposed to forming the composite by the powder metallurgy method as claimed.

While both the processes of casting and injection molding by powder metallurgy methods are known in the art, there is no teaching or suggestion that would motivate one of ordinary skill in the art to employ such a powder metallurgy process wherein the materials are selected from the materials containing two differently sized fillers such as is taught by Guerriero.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
